

Do you believe in miracles, those things that happen that can't be readily explained by the science that is currently available? Things like someone walking away from a horrific car crash without a scratch; a terminally ill patient who makes a full recovery leaving the doctors scratching their heads as to how it could have happened. Many people would call things like these miraculous because they believe that God was directly involved to suspend the regular laws of nature.

Christians know that miracles are possible. Jesus walked on water, gave sight to the blind. By multiplying 2 fish and 5 loaves of bread He made a feast for over 5000 people. Don't forget the Red Sea that was parted for Israel to walk through or the day that the Lord caused the sun to stand still so that Joshua and the armies of Israel had time to defeat their enemies.

But is God still performing miracles that supersede the laws of nature today as He did in times past? Different opinions abound.

What about near death experiences? Do people die and leave their bodies and then return? Have some gone to heaven and spoken to Jesus and been given messages to share upon their return?

What about dreams? Where do they come from and what do they mean? Are they heaven sent? The Bible records the times that God used dreams to give specific instructions to certain men. Does God still speak in dreams today?

These are interesting questions. Not everyone is agreed on the answers to them. Some say miracles still take place; others say that miracles were limited to biblical times. What do you think? Do demons still possess people? Do you have a guardian angel? What does God's word say?

Join us on Sundays for Bible class following the worship service. We will be starting a study entitled *The Unexplained; Miracles, Mysteries, and More* that explores these topics and gives some biblical insight that is helpful when wrestling with issues like these.

Please join us in our study. Your opinion matters and your presence will be welcomed.

Blessings,
Pr. Lucido
